---

instance). I can't find out what command to use in Automator. Is it possible? A: The following sub workflow attaches a gap of 8 seconds to the end of any video clip. The workflow uses Automator's Event Services, which means it can run in the background as a daemon. Also this workflow will work with Quicktime videos (not exactly QuickTime 8 but for practical purposes) In this case I use the MachuradoSuzuki.swift protocol, which take as input any source clip and append the clip to a new clip of the same length. The following is a workflow that uses this protocol and is NOT a daemon. It actually creates the new clip in the current workspace. For a daemon workflow (such as the one you posted, which also can be done with a quickTime filter effect using the "In Place" property) please see @J.F.Sebastiani's answer to the question adding 8 seconds to video using Automator. The present invention relates to an improved closed-end can making and filling machine of the type including a plurality of substantially cylindrical and rotatably supported forming and filling stations, respectively, c6a93da74d
